Searchtopic=A method for determining a per-point price for data processing services,
comprising the steps
of:
for each unit of a plurality of units of data processing services, determining a level of
environmental complexity, a level of change, and a type of environment;

for each unit of the plurality of units, assigning points to the unit responsive to its
level of environmental complexity, level of change, and type of environment, as
determined, and

summing the assigned points to provide a count of points for the unit;
summing the counts of points for all the units of the plurality of units to provide a
total number of points for the data processing services; and

dividing a baseline price for the data processing services by the total number of points
to
provide a per-point price.
